<b>CEI Evaluation</b>	06/13/2018	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NOSDS	Suborganization:		Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	NO	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	06/13/2018	Focus Area:	
Eval. Notes:	On 6/13/18, the Department conducted a routine RCRA inspection at Tunnel Barrel & Drum Co. (Tunnel) (NJD001601152), located in Carlstadt, NJ. The facility representatives were Mr. Joseph Binder, Jr., Consultant, and Mr. James Urcioli, Sales. Mrs. Maria Erickson (NJDEP) conducted the last RCRA inspection on 11/24/15. Tunnel was assessed as a small quantity generator (SQG) of hazardous waste. Tunnel provides drum cleaning, reconditioning and destruction of all types of drums, ranging from from metal to plastic drums, including tote containers. Tunnel collects RCRA empty drums from various customers throughout the area including flavors, fragrances, food, cosmetics, etc... Should a drum or tote not be empty, the customer is contacted, and informed they must pick up their containers. These drums are brought to the collection pit to be initially rinsed out and cleaned. The rinse water goes through an onsite filtration, and water treatment process - A) coarse filtrate system; B) fine filtrate system where actual fabric is used to collect the various sized solid particles; and C) the rinse water goes to a settling tank where the temperature & pH are monitored and adjusted accordingly. All wastewater on site goes through a system of Koch Ultra-Tubes to polish the rinse wastewater prior to being discharged to the Bergen County Utility Authority (BCUA) under permit. Hazardous waste is generated when residual solids, and liquid are collected from the rotary screen, which is part of the wastewater treatment process. The screen wastewater & solids are profiled as a characteristic (D004/D007/D010/D005/D006/D008) hazardous waste. The other hazardous waste generated onsite is from the spray booth operations used to spray paint barrels per customer request/requirements. Tunnel now uses only solvent-based paints in their painting operations. The waste paint is manifested offsite as a characteristic (D001/D039/D040) hazardous waste for both left over paints, and												

**No Linked Violations**

Note: Penalty information associated with an enforcement action is reported with the enforcement action. For enforcement actions associated with multiple violations, the penalty information will be reported with each violation, however, the penalty is only assessed once, regardless of the number of violations associated with the enforcement.

<b>CEI Evaluation</b>	11/24/2015	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	COMLE	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	YES	Sampling:	NO	Not Subtitle C:	NO	Day Zero:	11/24/2015	Focus Area:
Eval. Notes:	An SQG Standard compliance inspection was conducted for the above facility. The previous RCRA inspection was conducted on 1/9/13 with no violations cited. Tunnel Barrel & Drum Company Inc (TBDC) provides drum cleaning, reconditioning and destruction of all types from metal to plastic drums. Process: the site collects empty drums from various customers throughout the area including flavors, fragrances, food and cosmetic drums. These drums are brought to the collection pit to be rinsed out and cleaned. The rinse water flow goes through various filtration process: first it flows through a coarse filtrate system, then a fine filtrate system (where actual fabric is used to collect the various sized solid particles) and finally the rest of the rinse water flow goes to a settling tank where the temperature and pH is monitored and adjusted accordingly. According to the representatives, all wastewater on site goes through a system of Koch Ultra-Tubes that is used to polish the rinse wastewater prior to being discharged to the Bergen County Utility Authority (BCUA). Hazardous waste is generated from the solids collected through the process and collected in the rotary screen. The screen wastewater is profiled as hazardous waste with the following codes: (D004, D007, D010, D005, D006 and D008). Hazardous waste is also generated from the spray booth operations used to spray paint barrels per customer request. The paints are both solvent and water-based paints. This waste is profiled as (D001, D039, D040/F003) for both the paints used and cleaning the paint lines and spray guns with solvents. The (D001) waste code profile is from the petroleum waste distillate in the paint dust & chips. Non-hazardous waste is generated from non-recyclable fiber drums that cannot be reused after the cleaning process. These are still shipped out through Waste Management as non-hazardous waste. Universal waste (i.e. bulbs) is sent out for recycling and scrap metal											

## No Linked Violations

<b>CEI Evaluation</b>	01/09/2013	Activity Location:	NJ	By:	STATE	Identifier:	001	Person:	NOMPK	Suborganization:	Found Violation:	NO
NOC Date:		Citizen Complaint:	NO	Multimedia Inspection:	NO	Sampling:	NO	Not Subtitle C:	YES	Day Zero:	01/09/2013	Focus Area:
Eval. Notes:	Tunnel Barrel and Drum is a drum reconditioning, cleaning and destroying fiber, metal and plastic drums and containers for over sixty years. At this time, Tunnel Barrel is considered a borderline SQG/LQG based on the current operation and workload. At the time of inspection, there were five 55-gallon drums of waste stored in the HW accumulation area. Tunnel Barrel continues to operate their waste collection and disposal as a large quantity generator, to ensure that the drums do not accumulate for longer than 90 days. Tunnel Barrel provides yearly hazardous waste training for all their facility employees. Operations: The facility collects empty drums from various customers, including cosmetic, food, and flavors and fragrances, etc. The drums are brought to the collection pit where they are rinsed. The rinsewaters flows through coarse filtrate then fine filtrate (fabric used to collect various size solid particles), and settles in a settling tank. Temperature and pH is adjusted prior to entering the Koch Ultra-tubes, which is a process used to polish the rinsewaters prior to being discharged into the Bergen County Utility authority (BCUA). Hazardous Waste Generation: The hazardous waste generated in this process is from the "rotary screen waste", which are those solids that are collected through the process. The screen water is classified as Hazardous Waste due to the potential of levels of various TCLP metals that is present in the screen waste residuals, identified as Liquid Hazardous Waste D004, D007, D010, D005, D006, and D008. The other point of hazardous waste generation is the spray paint area, where barrels are painted with solvent-based or water-based paint (depending on the customer). The solvent-based paint generates hazardous waste from the cleaning of the paint guns and paint lines, identified as Waste Flammable Liquid D001, D039, D040/F003 and waste petroleum distillate from the paint
